

# Restoration: Dune it right!

So you or your community group or town are looking to build or restore the dunes along the beaches in your area and you are looking for information to help you do a great job?

We have created a web resource that answers a variety of questions that we have heard from people and groups like you, along with brief answers to those questions from experts in the area and links to more resources.

Among the issues we address are: permits and permissions, preparing a dune for planting, what to plant when, where and how, what not to plant, amendments to increase success of your plantings and sources of native plants for your restoration.

We hope that you find this useful as you work to rebuild or build stable, attractive dunes to protect your home or community from future storm damage.
